PROFESSIONAL SUMMARY

Technical support engineer specializing in **Microsoft Defender for Office 365** and **Microsoft Purview**, primary escalation contact for both across GCC and GCC High enterprise tenants. Owns the hardest email threat protection cases - phishing, malware, spoofing, BEC, mail flow, false positive and false negative disputes - and the full data governance surface: DLP, sensitive information types, labeling, retention, eDiscovery, and insider risk. Carries every case to written root cause analysis, investigating at data scale in KQL/Kusto across Advanced Hunting and Sentinel, with Defender for Endpoint depth underneath.

CORE COMPETENCIES

- Defender for Office 365
- Microsoft Purview
- Phishing / Malware / BEC
- DLP & PII Detection
- Threat Explorer & Message Trace
- Complex Technical Escalation
- KQL / Azure Data Explorer
- Root Cause Analysis
- Defender for Endpoint
- GCC / GCC High

EXPERIENCE

LTIMindtree

Sep 2024 - Aug 2025

Security & Compliance Engineer · Bellevue, WA

- Primary escalation contact for **Defender for Office 365** across GCC and GCC High: owned the highest-complexity phishing, malware, spoofing, and BEC cases end to end, reconstructing attacks in Threat Explorer and Message Trace and delivering written root cause analysis to technical leads and senior leadership inside SLA.
- Tuned the MDO policy surface to stop repeat cases rather than close single ones - anti-phishing and impersonation protection, Safe Links, Safe Attachments, quarantine and release, tenant allow/block list, mail flow rules - and resolved false positive and false negative disputes with evidence customers could act on.
- Escalation owner for **Microsoft Purview** across FedRAMP, NIST 800-53, HIPAA, and PCI-DSS environments: designed and troubleshot DLP policies, sensitive information types for **PII and credential detection**, sensitivity labels and auto-labeling, retention, litigation hold, eDiscovery, and Insider Risk Management, mapping each control to its regulatory requirement in Compliance Manager.
- Investigated at data scale in **KQL (Kusto)** across Advanced Hunting tables - EmailEvents, UrlClickEvents, CloudAppEvents - plus Sentinel and the unified audit log; turned recurring investigations into reusable saved queries the wider team ran without escalating.
- Built the team's escalation paths, case-routing criteria, and diagnostic playbooks from scratch as the MDO and Purview practice scaled from 3 to 20+ engineers; ran post-incident reviews and release and change communications with customer teams.

LTIMindtree

Dec 2023 - Sep 2024

Endpoint Security Engineer · Bellevue, WA

- Resolved complex **Defender for Endpoint** incidents inside customer tenants: Live Response forensic collection, infection-chain reconstruction through process trees, registry changes, and network telemetry, and root cause diagnosis - the device-side half of the email-borne attacks I later owned in MDO.
- Wrote KQL in Defender Advanced Hunting to sweep IOCs and exposure across large device populations; automated the repeated query paths and cut average investigation time by roughly **20%**.
- Traced onboarding, policy, and configuration failures through diagnostic logs and audit records and shipped corrective configurations at fleet scale - all 19 ASR rules via Intune, Group Policy, and PowerShell in Block, Audit, and Warn modes, plus Defender Antivirus, Firewall, disk encryption, and Conditional Access wired to MDE device risk.

Bellevue College

Dec 2018 - Dec 2023

IT Customer Support · Bellevue, WA

- Supported 15,000+ users across three campus computer labs - Microsoft 365, endpoint break/fix, and Entra ID / Active Directory account, MFA, and licensing administration - working tickets through TeamDynamix and scripting imaging and patch tasks in PowerShell.

PROJECTS

Grail

[Link](#)

- Python platform designed to assess an organization's Azure and M365 security stack against NIST 800-171/800-53, FedRAMP, HIPAA, and PCI-DSS controls and generate risk-tiered remediation roadmaps; uses prompt-engineered LLM calls with structured rubric scoring to grade each control area, built in a Git-based workflow.

M365Automation

[Link](#)

- PowerShell toolkit on the Microsoft Graph SDK using app-only authentication, pulling configuration and license state through REST APIs and reconciling it against the expected baseline to produce actionable reports.

EDUCATION

University of Washington · B.S. Electrical and Computer Engineering

Dec 2021 · Seattle, WA

CERTIFICATIONS

- SC-200: Microsoft Security Operations Analyst
- In Progress
- CompTIA Security+ SY0-701

SKILLS

Defender for Office 365: Threat Explorer, Message Trace, anti-phishing and impersonation protection, Safe Links, Safe Attachments, quarantine and release, tenant allow/block list, mail flow rules, SPF / DKIM / DMARC, phishing / malware / BEC investigation, false positive and false negative analysis, ZAP

Microsoft Purview: DLP policy design and tuning, sensitive information types, PII and credential detection, sensitivity labels and auto-labeling, retention policies, data lifecycle management, litigation hold, eDiscovery, Insider Risk Management, unified audit log, Compliance Manager

Defender for Endpoint: Live Response forensics, Advanced Hunting, ASR rules, Defender Vulnerability Management, device onboarding and health, Intune, Group Policy, Defender Antivirus and Firewall, disk encryption, compliance baselines

Identity & Cloud: Entra ID, Conditional Access, MFA, RBAC, PIM, Active Directory, Exchange Online, Microsoft 365, Azure, GCC / GCC High

Data & Automation: KQL / Kusto (Azure Data Explorer), large-scale telemetry analysis, Microsoft Sentinel, Python, PowerShell, Bash, Microsoft Graph REST APIs, Git and version-controlled workflows

Support Engineering: Complex escalation ownership, incident and problem management, root cause analysis, SLA-driven resolution, case triage and routing design, runbooks and knowledge articles, customer and executive communication

Compliance: FedRAMP, NIST 800-53, NIST 800-171 / CMMC, HIPAA, PCI-DSS, Compliance Manager control mapping
